Problem: Let X represent the difference between the number of heads and the number of tails obtained when a coin is tossed 6 times. What are possible values of X?

Solution: A coin is tossed 6 times and X represents the difference between the number of heads and the number of tails.

 $Y = \{0, 1\}$ represents the head and tail.

$$X(60,01) = |6 - 0| = 6 \tag{1}$$

$$X(50,11) = |5-1| = 4 (2)$$

$$X(40,21) = |4-2| = 2 (3)$$

$$X(30,31) = |3-3| = 0 (4)$$

$$X(20,41) = |2-4| = 2 (5)$$

$$X(10,51) = |1-5| = 4 \tag{6}$$

$$X(00,61) = |0 - 6| = 6 (7)$$

Thus, the possible values of X are 0,2,4 and 6.
